PROFESSIONAL SUMMARY

Hybrid Technical Product Manager and Software Engineer with 7+ years at HealthLevel, a radiology business operations platform. Joined as employee #~10 and helped scale the company to 50+ people. Transitioned from Full Stack / Data Engineering into Product Management in 2022, and now operate 80% as PM while continuing to provide hands-on engineering support. Direct report to the CEO. Deep domain expertise in healthcare IT, radiology workflows, and HIPAA-compliant data platforms. In 2026, took ownership of HealthLevel's neurology business (VA Tele-EEG and Telestroke programs), working directly with nurses, physicians, and neurologists on critical-care workflows. Active industry presence at major radiology trade shows including RBMA, SIMM, and AHRA.

WORK EXPERIENCE

Technical Product Manager & Senior Software Engineer | **HealthLevel Inc.** — Mountain View, CA
Jan 2022 – Present

- Operate as primary Product Manager (80%) while continuing to provide engineering leadership and technical oversight (20%), reporting directly to the CEO.
- Own HealthLevel's entire neurology business (2026): the VA National Telestroke and Tele-EEG & Epilepsy programs. Work daily with nurses, physicians, and neurologists to design critical-care workflows.
- Telestroke: awarded a VA National Telestroke Program contract (Aug 2026) to deploy Foundations™ for nationwide telestroke operations, covering patient hand-off, triage, live case tracking, and real-time dashboards.
- Drive product strategy and roadmap for Foundations™, HealthLevel's radiology business operations platform, covering financial, clinical, and operational analytics modules.
- Represent HealthLevel at major industry trade shows and conferences — RBMA (PaRADigm), SIMM, and AHRA — supporting sales and marketing with technical product expertise and customer engagement.
- Partnered with engineering to architect and deliver new platform modules, translating hospital customer requirements into actionable product specifications.
- Supported company growth from ~10 to 50+ employees by contributing to hiring, onboarding, and cross-functional team collaboration.
- Established a feedback loop between implementation teams, customers, and engineering, improving feature delivery cycles and customer satisfaction.

Software Engineer | **HealthLevel Inc.** — Mountain View, CA *Jul 2020 – Dec 2021*

- Full Stack and Data Engineering on the Foundations™ data analytics platform; designed and implemented software and data analysis modules addressing business and clinical requirements.
- Owned end-to-end development and deployment of a data-driven workflow engine for Radiologists to process orders in VA government hospitals, improving efficiency by over 40% in VA patient care.
- Built a platform and implementation toolset for implementation managers to onboard and support hospital staff across the US.

Software Engineer Intern | **HealthLevel Inc.** — Mountain View, CA *May 2019 – Dec 2019*

- Developed on a HIPAA-compliant distributed web and mobile data analytics platform serving hospitals across the US.
- Implemented an encrypted deep-link URL generation module enabling secure sharing of reports across authorized users.
- Created an insightful report UI to convey data analysis results to stakeholders, contributing to a forecasted revenue increase of 30%.

Web Developer Assistant | **San Jose State University** — San Jose, CA *Jan 2019 – May 2020*

- Migrated, redesigned, and overhauled university departmental websites to support modern responsive design standards.
- Maintained the campus website and revamped web pages to improve navigation for staff and students.

Programmer Analyst | **Cognizant Technology Solutions** — Pune, India*Sept 2015 – May 2018*

- Developed and maintained web applications for the Security and IT Applications Engineering Group across India and the US.
- Wrote stored procedures in SQL to integrate back-end web services used by upstream and downstream web applications.
- Won an internal hackathon focused on enhancing code quality and security using the CAST Engineering dashboard.

EDUCATION

M.S. Computer Engineering — San Jose State University, CA*GPA: 3.64 / 4.00* | *Aug 2018 – May 2020*

B.E. Electronics & Telecommunication — Savitribai Phule Pune University, India*GPA: 3.70 / 4.00* | *Aug 2011 – May 2015*

SKILLS

Product Management: Product strategy & roadmap, customer discovery, stakeholder management, trade show / conference representation, cross-functional team leadership

Programming: JavaScript, TypeScript, C#, Java, Python

Web / Frameworks: HTML, CSS, ReactJS, AngularJS, jQuery, Node.js, .NET MVC, Distributed Systems, JSON

Data & Databases: MySQL, MS SQL Server, MongoDB, ETL pipelines, data analytics

Cloud & DevOps: Amazon Web Services (AWS), Microsoft Azure, CI/CD, IIS

Tools & Services: Git, JIRA, Confluence, Postman, Fiddler, AppDynamics APM, Google Analytics, LDAP

Compliance: HIPAA-compliant system design and development

NOTABLE PROJECTS

VA Radiologist Workflow Engine

Data-driven workflow engine deployed in VA government hospitals to streamline radiology order processing, improving operational efficiency by over 40%.

Azure to AWS Edge Device ETL Transfer Utility

Automated patient data transfer by configuring edge devices in hospital servers; built a Windows service to load files from Azure File Share and upload to Amazon S3, improving transfer efficiency by 80%.

Smart Card Access Management System

Interfaced APIs to handle facility-based access requests, reducing processing time and SLA ticket volume by 70%. Used AppDynamics for monitoring and efficiency improvements.

Blockchain-based Vehicle Service Management System (Research)

End-to-end car management with service prediction using the MERN stack. Leveraged Ethereum for a decentralized, secure platform; applied data analytics to improve efficiency.

The Pandemic Chronicles — Web Application & Data Visualization

Full stack application to explore and visualize historical and current pandemic data. Built a data pipeline to consume, clean, and remodel data from an API provider, with live charts via Google Charts.
